

Re: Tempus Project Nr.158881 – TEMPUS – 1 -2009 – 1 – RS – JPHES

Summary:

The national platform for a knowledge triangle in Serbia was installed including a national and international Advisory Board for research, innovation and education (NIIAB).

The mobility activities for staff and students were very well planned and organized.

The equipment was professionally selected and installed.

Three technology transfer centres have been established at the University of Nis, Kragujevac and Novi Sad.

A very important point was to make closer connections between Universities, research institutions and the industry. By means of some conferences, visits and the work of the KTC's this point is also fulfilled.

Therefore the main goals of the project were reached.

Academic and administrative management of the project was excellent and the atmosphere during the meetings and conferences was very familiar.
